## Fiberglass, cellulose and polypropylene pleated Filter Cartridges and Capsules

For efficient protection of membrane filters and clarifying filtration of liquids

### Description

The EPV.SC cartridge is produced on the basis of the pleated filter material made of microfine glass, cellulose and polypropylene fibers. Efficient filtration is achieved by means of high adsorption of fiberglass and cellulose and diversity of chemical nature of microfibers in combination with mechanical retention.

### Features and advantages

Features	Advantages
Glass, cellulose and polypropylene microfibers based pleated cartridge	<ul style="list-style-type: none"> <li>High filtration efficiency (&gt; 98-99.5 %);</li> <li>Increased contamination capability and lifetime provide long-term operation without regenerations;</li> <li>Excellent hydrophilicity of fibers ensures filtration under minimal differential pressure (even by gravity flow);</li> <li>Designed for highly efficient clarifying filtration and protection of membrane filters.</li> </ul>
High strength, the stable matrix of the cartridge	<ul style="list-style-type: none"> <li>Filter material structure precludes the possibility of 'dusting' and medium migration;</li> <li>Withstands multiple wash outs and sterilizations;</li> <li>Reliable filtration under heavy duty operational conditions.</li> </ul>
